

FOR HSE AND OPERATIONS TEAMS AT AUSTRALIAN MINE SITES

Make the call with confidence, every time conditions change.

TARP-aligned alerts and Australian-based support, so you can protect production without cutting corners on safety.

PURPOSE-MADE FOR MINING OPERATIONS

One view, every site.

See every mine site and its current alert level, at a glance.

Alerts in your operation's language.

"Crane wind limit" instead of "Wind: 48km/h." Aligned to your TARP.

QR code onboarding.

Every contractor and visitor is enrolled before they start work.

Australian-based support.

Named contact. Phone and email.

HOW IT WORKS

1 Set up your site

Create your mine site in the Command Centre. Pin your location, configure thresholds, and name alerts in operational language. Self-serve.

2 Enrol your team

Generate a site QR code. Anyone who arrives scans it, downloads the app, and is immediately enrolled: staff, contractors, and visitors alike.

3 Get alerts, keep the record

Alerts go to every enrolled user and the dashboard. The log captures every event automatically.

What's included in SiteOps

TARP-aligned lightning alerting

Multi-level alerts, formal all-clear, automatic log of every alert.

Configurable downgrade timers

Different resumption wait times for Red, Orange and Blue.

Operational alert naming

Your site's language, aligned to your TARP escalation: "Crane wind limit," "Haul road threshold."

QR code site onboarding

Scan on arrival, enrolled immediately: staff, contractors, visitors.

Command Centre

Multi-site dashboard. All sites, all alert states, in one view.

Companion mobile app

Push notifications on iOS and Android. Optional location sharing for personal safety.

API and webhook integration

Alert data via REST API and webhooks for your central ops platform.

Australian-based support

Named contact. Phone and email.

Pre-start reports COMING SOON

Daily brief of active thresholds and forecast conditions, ready for your pre-start meeting.

Post-event reports COMING SOON

Exportable report of every alert event, ready for downtime and safety reporting.

See what configurable alerts look like against your actual TARP.

Bring your TARP. Test it against real thresholds.
